

Tesco Extra Bakery Case Study

Type: Resin Flooring  
Sector: Commercial

# Tesco Extra Bakery

Vuba has carried out resin flooring installations to more than 20 Tesco stores throughout England, Wales and Scotland. Tesco specified Vuba-Screed Ultracrete for its durability, chemical resistance and food safe chemical composition.

Our polyurethane resin flooring system, Ultracrete, is much more hygienic than the traditionally used tiles because it is installed as one seamless finish instead of having the bacteria trap of grout between tiles.

## Method:

We start by installing a polymer modified granolithic screed to match the levels of existing concrete laid for the Terrazzo tiles. A screed for a resin floor has to be below 75% relative humidity to prevent blistering in the resin finish. After installing the polymer screed we test the moisture content of the screed using a Digital Hygrometer.

When ready we apply the Ultracrete 9mm polyurethane resin screed, along with 100mm high coving render to the walls and a polyurethane flexible expansion joint around the perimeter.

“

We are very happy with the relationship we have built up with Tesco and their principal contractors over the years. We spent time with their design department implementing the right specification for their needs, and we have then gone on to implement that specification on site time and time again.

Sean Scott, Director,  
Vuba Flooring Limited
